

# CS 440 Meeting Minutes

Group: 13

Date: 03/06/2021

Time: 6:00

Duration: 1 Hour

Present, on time: Tyler, Jasmine, Mansi

Present, not on time: N/A

Absent: N/A

Synopsis:

Worked on the remaining parts of the design document together and then decided on tasks for everyone for the coming week. Added sprints on Jira.

Recent Accomplishments:

- Tyler set up the Login and User Account Creation with Firebase Authentication.
- Jasmine fixed front-end UIX and added more functionality. The colors are different and the positions of the layout are much different.
- Mansi: worked on intents and event listeners and back-end stuff.

Current Activities: Got major updates to the project set up and pushed out. Set Authentication for user login/account creation, UI elements updated and made closer to the main goal, and set up Firebase fully.

Action Items:

Mans: Will continue working on the UI back end stuff. Will research how to let users post pictures from their trails.

Tyler: Get a barebones Firebase callback for the Emergency Function set up and get severity levels set as well.

Jasmine: Will start and research how to use a nature API to grab the URL with the api key and fetch the information and turn that information into a JSON file object in order to reference the information declared. Will start to code and hopefully test out if the fetch worked. Will start adding it into the activities.

All: Work on the design document and get Part II of it done before next week Saturday.
